Singapore Maths: Let's count objects up to ten!

10 October 2017

Hi everyone! Today we practiced counting objects from 1 to 10. We had a lot of fun being creative whilst developing our number sense with a few hands-on activities.

We started our day off by counting the manipulatives we were given. We were then shown a quantity on fingers, which we had to count and show on a ten-frame. For some of us it was our first time, so we needed some guidance completing the task.

In our second activity we were given a key with coloured stickers. Each colour represented a different number. The number 1, for example, was purple. The number 5, for example was green. Our little friends then had to match up each number with the corresponding coloured sticker. Each of us had a series of 4 numbers to look for.

Our final activity of the day was so much fun! We had a variety of pictures with numbers. For each of our pictures, either a ladybug, caterpillar or a flower we had to paint the quantity...with our fingers! We enjoyed using paint and learning more about numbers in a fun messy way.

We all enjoyed today a lot, join us again next time for more Singapore Math!
