

# BEE-BOT CLUB

Dear Parents

During today's Bee-Bot Club, the students got the opportunity to use their navigational skills, counting skills and listening skills. We created our very own town, decked out with a hospital, a fire station, a school, a post office, an airport and even a space station, with highways leading to them. The students had the option of choosing which of these locations to visit. Then, they had to count the number of moves the 'Bot' needed to get to the traffic signal, choose the correct turn based on the signal and once more count the number of moves to get to the entrance to their chosen location and finally count the number of moves to get from the entrance to the location.

It was a lot of fun and the students had to think about several factors while they programmed their 'Bots' to navigate to their chosen location.

The students all did their best to see if they could get their 'Bot to the location with one precise programming. It was a lot of fun and excitement.

See you next week for another fun filled class.

Howard.
